Syllabograms are **graphemes** used to write the **syllables** or **morae** of words.

Syllabograms in **syllabaries** are analogous to **letters** in **alphabets**, which represent individual **phonemes**, or **logograms** in logographies, which represent **morphemes**.

Syllabograms in the [Maya script](#) most frequently take the form of V (vowel) or CV (consonant-vowel) syllables of which approximately 83 are known. CVC signs are present as well. Two modern well-known examples of syllabaries consisting mostly of CV syllabograms are the Japanese [kana](#), used to represent the same sounds in different occasions. Syllabograms tend not to be used for languages with more complicated syllables: for example [English phonotactics](#) allows syllables as complex as CCCVCCCC (as in [/ˌstrɛŋkθs/](#) *strengths*), generating the use of syllabograms cumbersome.^[1]
